

a-mats Protector

Modular PVC matting system

a-mats Protector is the flexible solution to many entranceway matting requirements. This robust system gives a choice of tufted nylon or fibre ribs with integrally moulded alternating vinyl rib scraper bars. The convenient wiper strip modules simply clip together to form a secure assembly. If required the matting may be trimmed to shape with a craft knife. The system provides an 'off the shelf' solution that any floor-layer can install. The economical modules can be lifted, re-arranged and re-installed for even wear distribution. With a nominal thickness of 12mm the product can be used for recessed or flat-to-floor applications.
