

Planning

There is a wealth of experience available to help with planning and product selection, both in the field and through our technical services department. Offering application based solutions defined by scraper profile and wiper fibre construction, with due consideration to location, performance requirements and operational maintenance regimes, **a-mats** provide the complete checklist for failsafe specification.

a-mats strategic manufacturing processes enable the company to maintain a principled competitive focus with a genuine aim to provide more and better options than the competition. All **a-mats** products are designed for simple on-site trimming and shaping where possible.

Manufacture

a-mats entrance matting systems are manufactured to ISO standards. The ISO 9000 series set by the International Standards Organisation provides a Quality Assurance system for world class companies in almost 100 countries. Our products are manufactured in a purpose-built, state-of-the-art manufacturing facility which is uniquely positioned to provide rapid response solutions to customers needs. AML is an innovative organisation and we constantly engage new technologies in the improvement of our entrance matting systems.
